

K.G. Feature Test Cases

Kanish Garg (K.G.)

Team 53 - CSE 360 Phase 1

These cases cover account deletion and the related interface changes. Use disposable accounts for deletion checks. Each case lists the action and the expected result.

1. Cancel deletion

Select an account and choose No in the confirmation message.

Expected result: The account remains available.

2. Close the confirmation

Open the confirmation and press Escape or close the message.

Expected result: The account is not deleted.

3. No account selected

Open the deletion page without selecting an account.

Expected result: The Delete account button is disabled.

4. Confirm deletion

Select another account and choose Yes.

Expected result: The selected account is removed and the list is refreshed.

5. Delete own account

Select the signed-in administrator account and confirm.

Expected result: The app refuses to delete the account and explains why.

6. Check administrator access

Try the deletion operation without an administrator session.

Expected result: The operation is refused and no accounts are changed.

7. Check deleted account access

After deletion, try the removed account's normal password and any active one-time password.

Expected result: Neither gives access to the removed account.

8. Check the selected account

Select an account and read the details and confirmation message.

Expected result: The name, email and roles match the selection. The confirmation identifies the account to be deleted.

9. Check an old selection

Remove an account, create another with the same username, and try deleting through the old selection.

Expected result: The replacement account is not deleted.

10. Check a failed database operation

Use a test database that prevents deletion and attempt to remove an account.

Expected result: The operation reports failure and the account remains.

11. Check changed permissions

Remove the signed-in user's administrator role before they attempt deletion.

Expected result: Deletion is refused.

12. Check renamed administrator

Change the signed-in administrator's username, then try to delete that account.

Expected result: Self-deletion is still refused.

13. Check invitation input

Try a blank invitation code and one longer than 10 characters.

Expected result: The app asks for a code between 1 and 10 characters. A code within that length still needs to be a valid invitation.

14. Check login input

Try a username longer than 32 characters or a password longer than 64 characters.

Expected result: The login attempt is rejected.

15. Check the confirmation buttons

Open the deletion confirmation and inspect the choices.

Expected result: Yes is not the default action. No is the default and cancel action.

16. Check the shared appearance

Open login and deletion and move between the application pages.

Expected result: The shared style is applied, the fields are readable and the buttons remain usable.
