

User Experience

Kanish Garg (K.G.)

Team 53 - CSE 360 Phase 1

Application used for reference

GitHub was used as a reference for the interface. Its account settings use clear labels and keep related information together. This makes it easier to find a field and understand what to do next.

Bio

Profile picture

The same idea is used in our login page. The username and password fields have labels above them. Signing in and creating an account with an invitation code are in separate sections.

Common interface choices

The pages use a light background, readable text and consistent spacing. Blue buttons show the main action. Red is used for deleting an account. Password fields stay masked. Error messages explain what needs to be fixed.

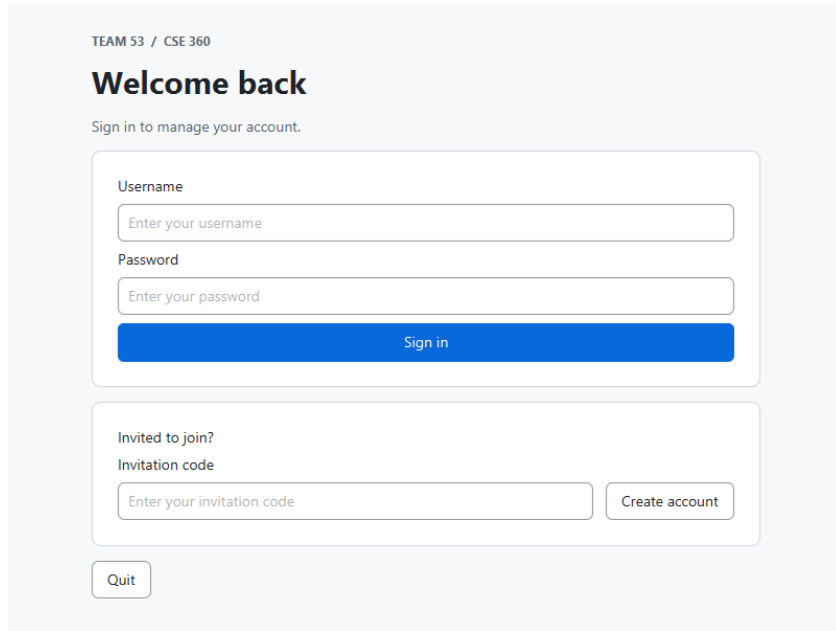

These are the proposed shared interface choices. The team still needs to agree on them before the final submission.

Reference

GitHub Docs, "Personalize your profile." The screenshot above comes from this page.

Login and account deletion

The login page groups the sign-in fields together and places the invitation code below them. Each section has a button that describes its action.

Invitation code

On the deletion page, the administrator selects an account and sees its details. The Delete account button opens an "Are you sure?" message with the selected username. No is the default choice. Choosing Yes removes the account, while choosing No or closing the message leaves it unchanged.

Deletion is permanent. You cannot delete your own account.

An administrator cannot delete their own account. Deletion is permanent in the current implementation. The screenshots show the application with sample account details.
