User Experience Stories

Admin (Phase One)

1	**One-Time Password** As an admin, I can set a one-time password for a user who has forgotten their password. Using that one-time password, the user can log in to establish a new password. Once a user has logged in with the one-time password, it is cleared so it can't be used again. After setting a new password, the user must log in again.
2	**Delete a User Account** As an admin, I can "delete" a user account so individuals who are no longer associated with the organization are unable to use the system. An admin is not allowed to remove that admin's access. (If an admin must be removed, some other admin must do it to ensure that at least one admin is available to do admin work.) When deleting an account, an "Are you sure?" message must be answered with "Yes" to remove access.
3	**List User Accounts** As an admin, I can list all user accounts to help me perform my administrative functions. The list shows each account's username, the user's name, the user's email address, and the roles the user plays.
4	**Add or Remove Roles** As an admin, I can add or remove roles for each user.
