

1. **Hold 2 “standup” meetings a week.** (Required by course, provides clarity between team’s expectations)
2. **Being responsive; WITHIN 6 hours.** (Ensures quick communication for effectively mitigating problems)
3. **Being punctual for group meetings, and participating in the discussions.** (To make sure we can coordinate efficiently)
4. **Being respectful and understanding.** (To avoid miscommunication and have better team spirit)
5. **Attempt to reach a compromise for disagreements.** (Human civilization is built, and runs on this)
6. **Complete assigned work by the team-agreed internal deadline.** (Provides sufficient time for review, testing, integration, and correction before the official submission deadline)
7. **Coordinate changes that affect shared code or another member’s work before implementing them.** (Prevents conflicting implementations and reduces integration problems)
8. **Review and test integrated work as a team before submission.** (Ensures the final application and deliverables function together correctly rather than merely having individually completed components)
